Product Description

Features:

- For light to heavy shoe traffic areas
- Mineral-coated, high friction slip-resistant surface
- Highly durable surface withstands the rigors of equipment traffic
- Low-profile design helps reduce trip hazard
- High performance pressure-sensitive adhesive for easy application

Now with proprietary 3M™ Controltac™ Film Technology and 3M™ Comply™ Adhesive Technology in the liner. 3M™ Controltac™ Film Technology has posts that allow the traction

material to be repositioned on the surface before final adhesion, saving time and virtually eliminating rework.

3M™ Comply™ Adhesive Technology provides air release channels in the liner providing a bubble free application to help ensure a smooth adhesion to the surface. The channel pattern is replicated onto the Safety-Walk™ adhesive and allows air to be released to the edge of the traction material when pressure is applied. This mineral coated, slip resistant material features a highly durable surface. Low profile design helps reduce trip hazards. Primarily for use on dry, wet, oily floors in industrial and commercial applications with intensive pedestrian or light vehicle traffic such as: corridors, production and storage rooms, ramps, stairways, ladders, footplates on machines and emergency exits.

3M™ Safety-Walk™ Slip Resistant Tapes and Treads Series 600 has been certified by the National Floor Safety Institute (NFSI) as providing "high-traction." A wet static coefficient of friction (SCOF) of greater than 0.60 was chosen by NFSI as the criteria for "high traction" because according to NFSI, floor surfaces maintaining this level of slip resistance when wet have proven to reduce slip-and-fall claims by between 50% and 90%.
